                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides proteins (AAY27201-245) from Neisseria meningitidis (strains A and B) and nucleic acid sequences (AAX99123-167) encoding the proteins. Compositions comprising the protein, nucleic acid or antibody specific to the protein are useful as pharmaceuticals, e.g. a vaccine composition or a diagnostic composition. The composition is also useful for treating or preventing an infection due to Neisserial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New protein and its nucleotide sequence, diagnostic compositions for treating and meningitidis infections

                                                                                                                                                                                                    The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kba. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans. The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, especially in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.

                                                                                                                                                                                                                                                                                                                                           characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylactic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding wild-type surface antigen. The present sequence representing the wild type surface antigen NhA from N. meningitidis strain PMC21 is 1 of 10 NhhA polypeptide sequences (AAU06171-AAU06180) from 10 different N. meningitidis strains given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to the isolation of novel Neisseria meningitidis mutant polypeptides of the surface antigen Nhha (AAU06182-AAU06186). The modified or mutant Nhha polypeptides are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim

                                                                                                                                                The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, especial in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.
                                                                                                                                                                                                                                            The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kDa. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             .24-JUN-1999

This is the Nisseria meningitidis BASB029 amino acid sequence from CC serogroup B strain H44/76. The BASB029 protein is homologous to the Haemophilus influenzae surface fibril (HSF) protein. The invention CC relates to BASB029 polynucleotide sequences (AAX39864-Z3985) and Dolypeptide sequences (AAY57044-Y57045) and their immunogenic fragments. CC BASB029 polypeptides are useful in a method of diagnosing a Neisseria CC meningitidis infection in a mammal. Compositions containing BASB029 polypeptides are useful for generating an immune cresponse in an animal. A therapeutic composition comprising an antibody CC directed against BASB029 is useful in treating humans with Neisseria CC meningitidis disease. The polynucleotide is useful in the diagnosis of the stage of infection, type of infection, susceptibility to an CC the stage of infection, type of infection, susceptibility to an CC infection which results from increased or decreased expression of the CC polynucleotide, and for therapeutic or prophylactic purposes, CC polynucleotides and polypeptides are also useful in the CC particularly bacterial infections. The protein is useful in the CC particularly bacterial infections. The protein is useful in the CC portein is useful for the stimulation of the immune system of an organism or protein is useful for the stimulation of the immune system of an organism or protein is useful in the stimulation of the immune system of an organism or protein is useful in the stimulation of the immune system of an organism or protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protein is useful in the stimulation of the immune system of an organism protei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptide from neisseria meningitidis useful for diagnosis, treatment or prevention of bacterial infections in mammal

                                                                                                                                                                                                                                                                                                                  The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, especial in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.
                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kDa. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans the detection or diagnosis of N. meningitidis infection in humans the detection or diagnosis of N. meningitidis infection in humans the detection or diagnosis of N. meningitidis infection in humans the detection or diagnosis of N. meningitidis infection in humans the detection or diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the detection of diagnosis of N. meningitidis infection in humans the det
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Surface protein; surface glycoprotein; infection; vaccine;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to the isolation of novel Neisseria meningitidis mutant polypeptides of the surface antigen Nhha (AAU06182-AAU06186). The modified or mutant Nhha polypeptides are characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylactic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding whild-type surface antigen. The present sequence representing the wild type surface antigen Nhha from N. meningitidis strain EG329 is 1 of 10 Nhha polypeptide sequences (AAU06180) from 10 different N. meningitidis strains given in the present inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 QY
                              The present invention relates to the isolation of novel Neisseria meningitidis mutant polypeptides of the surface antigen NhhA (AAU06182-AAU06186). The modified or mutant NhhA polypeptides are characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylactic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding wild-type surface antigen. The present sequence represents N. meningitidis strain H41 surface
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Surface mutant;
                                                                                                                                                                                              New NhhA surface antigen polypeptides and polynucleotides Neisseria meningitidis, useful in producing vaccines for t preventing broad spectrum of Neisseria meningitidis -

                                                                                                                                                                                                                                                                                                                        meningitidis mutant polypeptides of the surface antigen NhhA (AAU06182-AAU06186). The modified or mutant NihA polypeptides are characterised by deletions of non-conserved amino acids, particularly the deletion of variable regions. The deletion mutants are useful in diagnostics, therapeutic and prophylactic vaccines against a broader spectrum of N. meningitidis, and in designing and/or screening of medicaments. The mutant proteins when used as a vaccine can effectively immunise against a broader spectrum of N. meningitidis strains than would be expected from a corresponding wild-type surface antigen. The present sequence representing the wild type surface antigen NhhA from N. meningitidis strain Z2491 is 1 of 10 NhhA polypeptide sequences (AAU06180) from 10 different N. meningitidis strains given in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New NhhA surface antigen polypeptides and polynucleotides from Neisseria meningitidis, useful in producing vaccines for treating preventing broad spectrum of Neisseria meningitidis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2001-488774/53

                                                         The present sequence represents a surface protein of Neiserria meningitidis which is approximately 62 kDa. The N. meningitidis surface glycoproteins, nucleic acids, the primers and optionally a thermostable polymerase, or antibodies are useful in a kit for the detection or diagnosis of N. meningitidis infection in humans The N. meningitidis surface glycoproteins can also be used to prevent or treat N. meningitidis infection in humans, especially in the form of vaccines. The proteins and antibodies can also be used to identify immunoreactive peptides.
                                                                                                                                                                  Claim

CC This is the Nisseria meningitidis BASB029 amino acid sequence from CC serogroup B strain ATCC13090. The BASB029 protein is homologous to the CC Haemophilus influenzae surface fibril (HSF) protein. The invention CC relates to BASB029 polynucleotide sequences (AAZ3964-Z39865) and CC polypeptide sequences (AAX57044-Y57045) and their immunogenic fragments CC BASB029 polypeptides are useful in a method of diagnosing a Neisseria CC meningitidis infection in a mammal. Compositions containing BASB029 polynucleotides and polypeptides are useful for generating an immune CC response in an animal. A therapeutic composition comprising an antibody CC directed against BASB029 is useful in treating humans with Neisseria CC the stage of infection, type of infection, susceptibility to an CC infection which results from increased or decreased expression of the Stage of infection and for therapeutic or prophylactic purposes, particularly genetic immunisation. Antibodies against BASB029 CC polynucleotides and polypeptides are also useful for treating infections CC particularly bacterial infections. The protein is useful in the Screening and development of antibacterial drugs. Fused recombinant constants and constants are also useful for treating infections.
